

**GNSS**  
**Centre of Excellence**

Czech Republic

Prague, May 23, 2013

# Contents

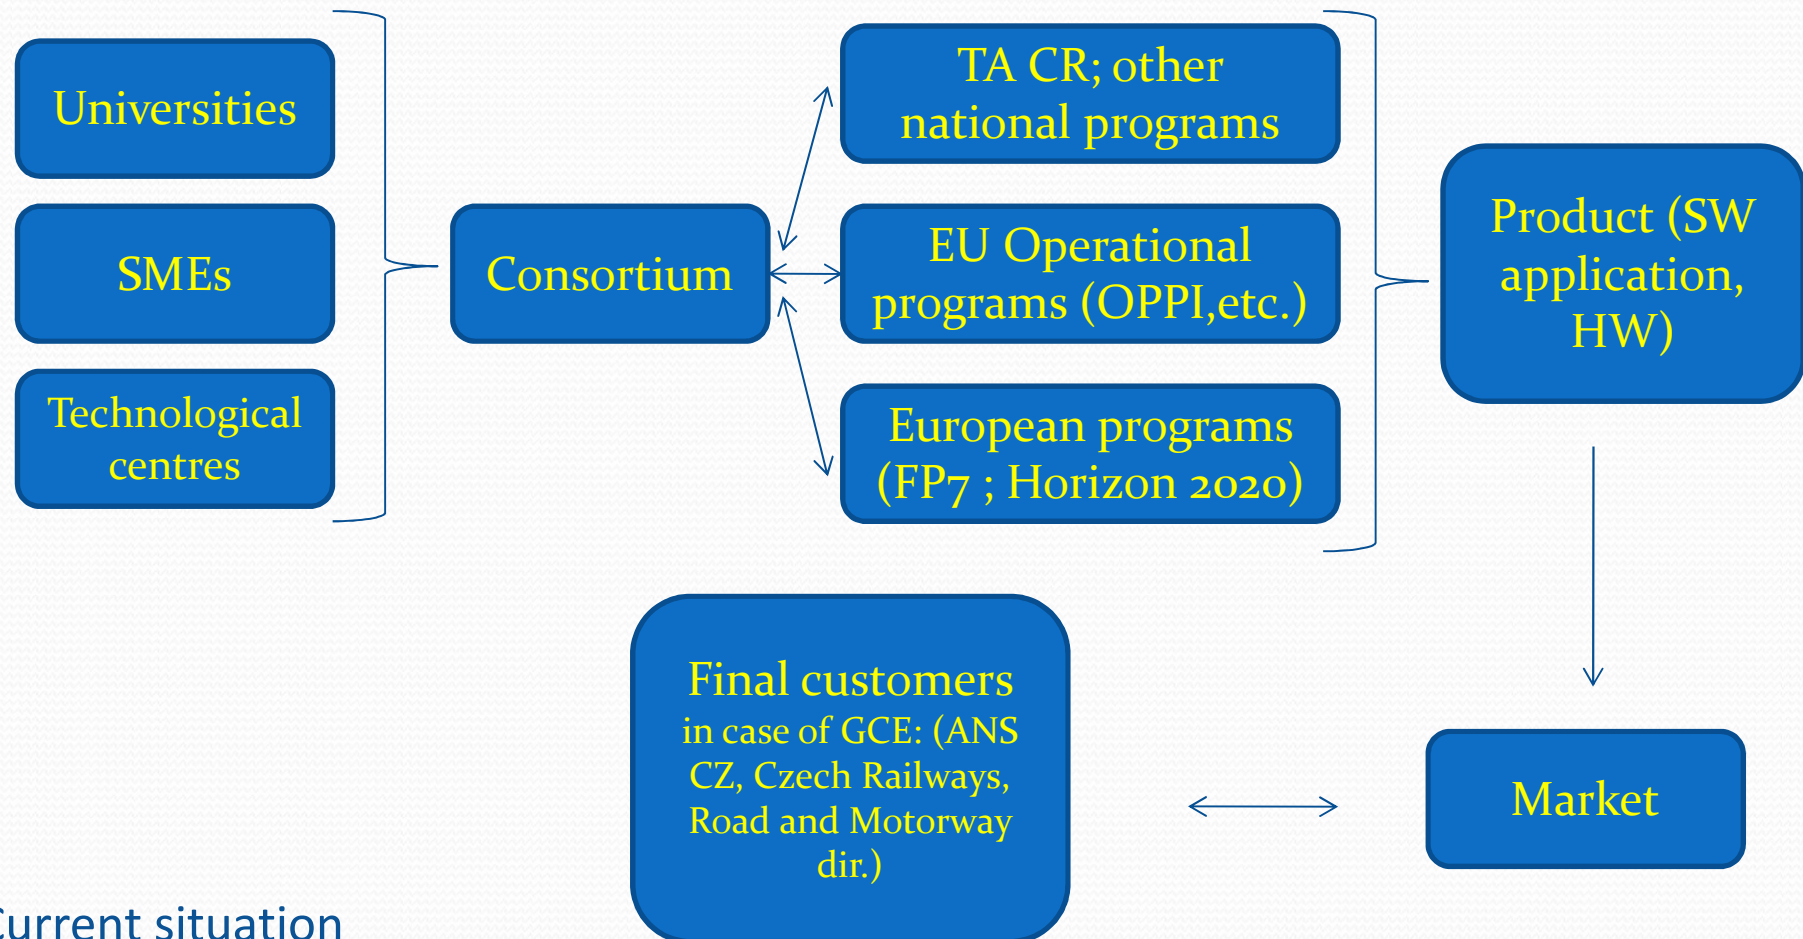

- I. Objectives of the GNSS Centre**
- II. Our targets**
- III. Organizational Chart**
- IV. Services of the Centre**
- V. Areas of interest**
- VI. Summary**

# I. Objectives of the GNSS Centre

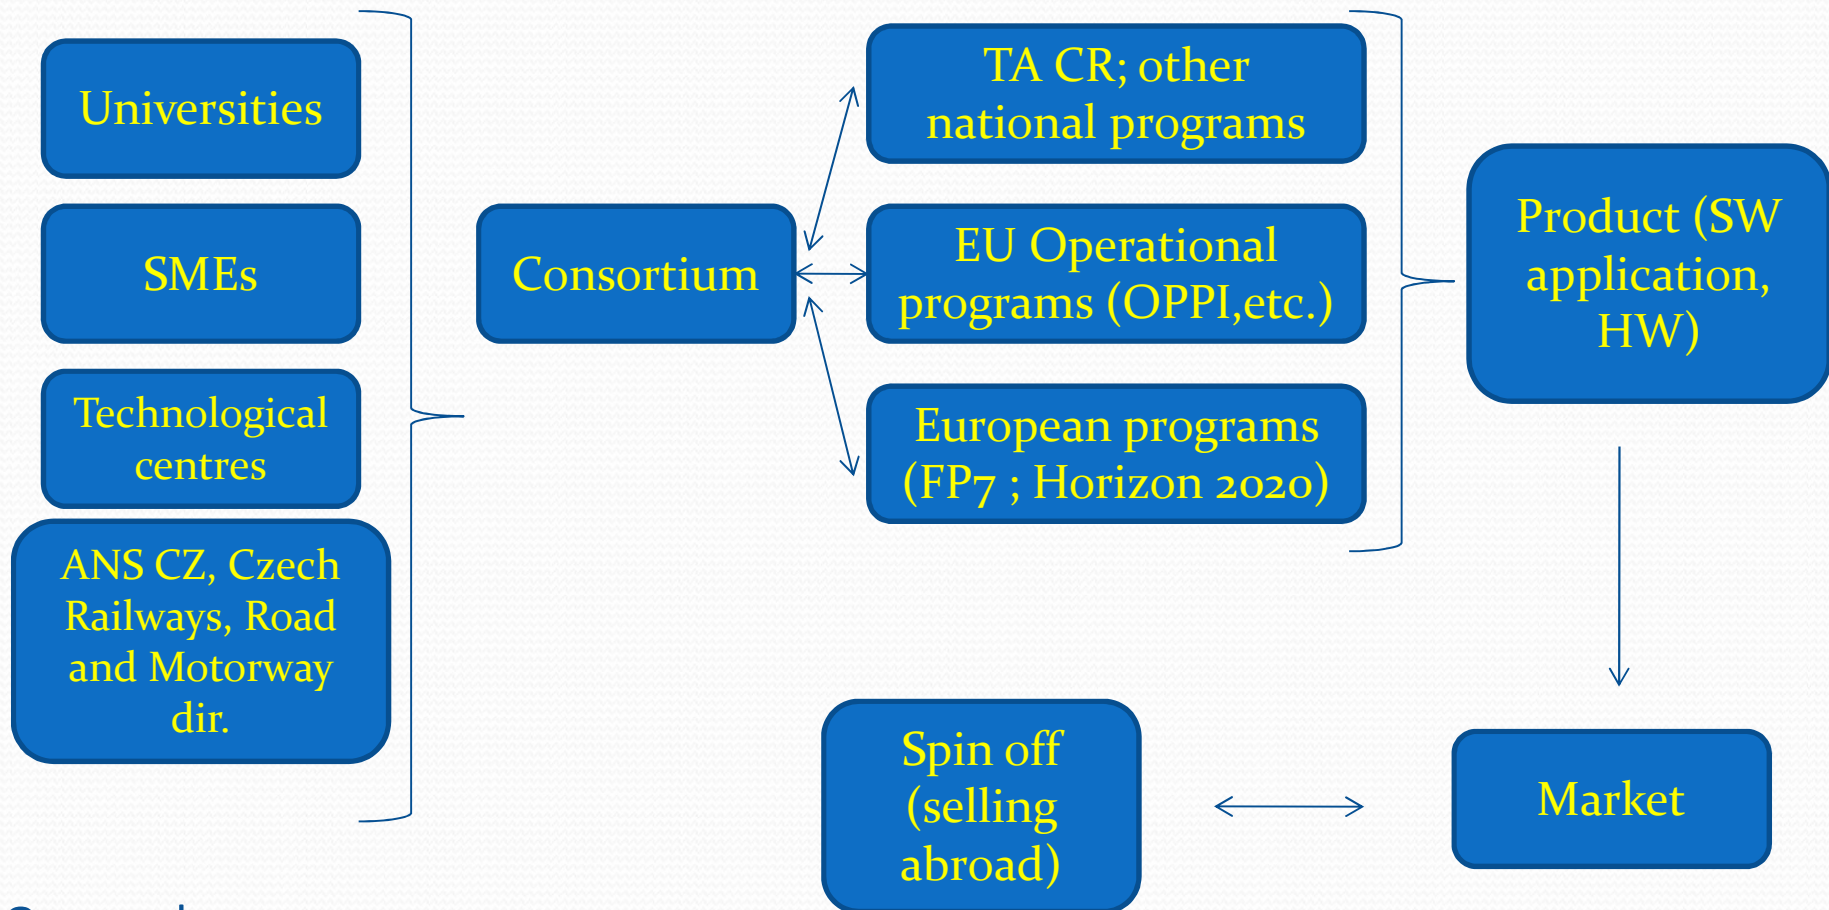

- To promote the development of GNSS applications in the Czech Republic via the cooperation of the Prague Airport, the Air Navigation Services of the Czech Republic (RLP - ANS CR), the Czech Railways (CD) and other entities in the sector of transport with Czech industry and the academic sphere
- To promote the image of the members of the association as innovative companies that develop and use modern technologies
- To accelerate the development and deployment of applications based on EGNOS and in the future GALILEO
- To support the activities of the GSA Agency in Prague

## II. Our targets

Current situation

## II. Our targets

Our goal

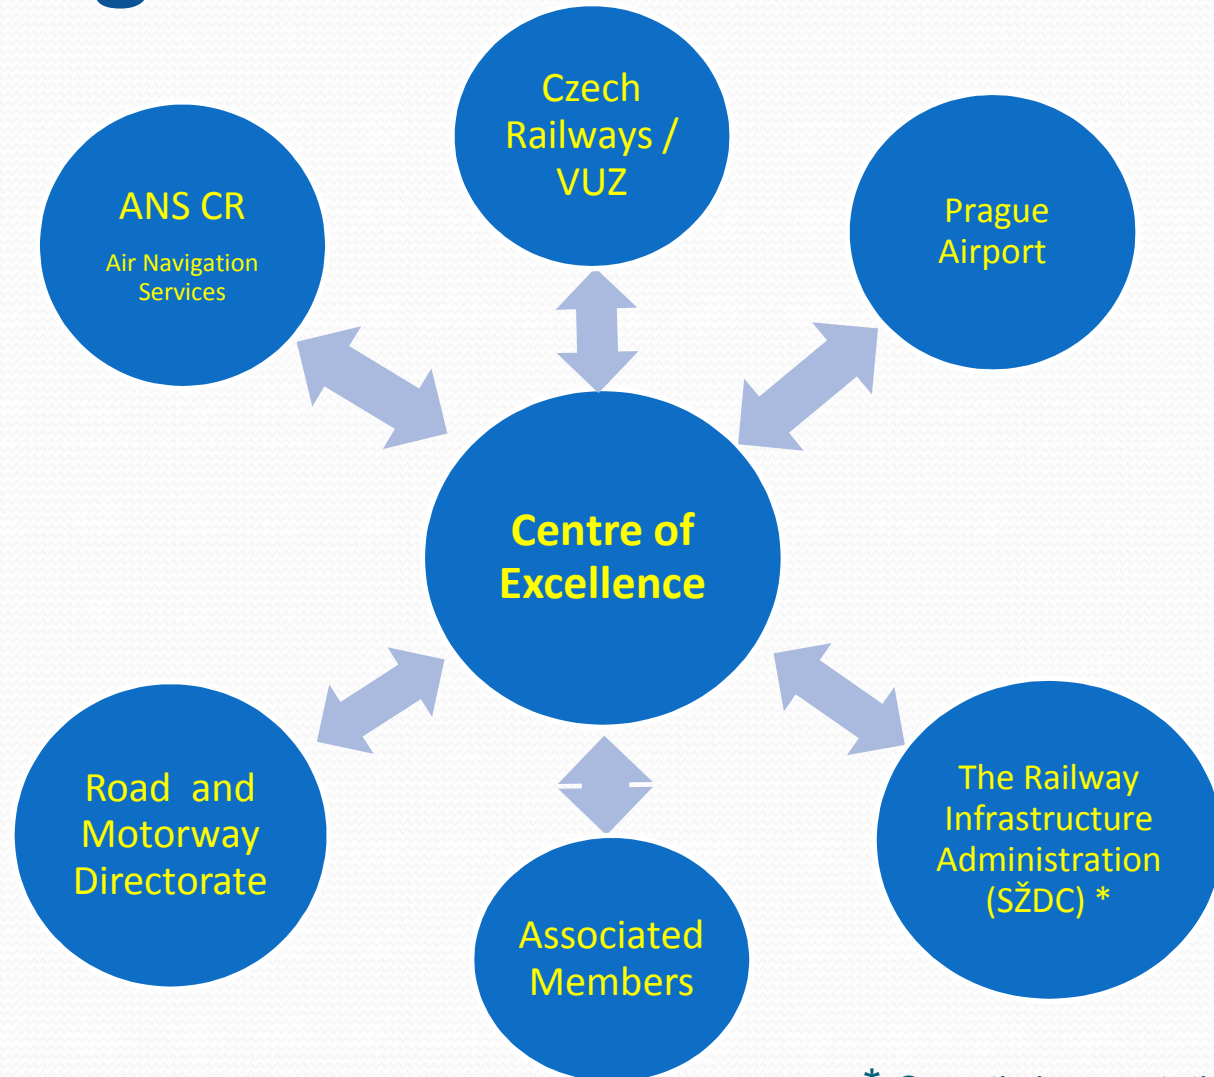

## II. Our targets

### **Main advantages:**

- Our members can identify exactly their needs and final product will suit to real customers
- Members can offer co financing
- Public procurements
- Cost for state (and state owned companies)
- Show case (marketing)
- Spin off (selling abroad)

# III. Organizational Chart

Supported by:

European GNSS Agency

Ministerstvo dopravy

\* Curretly in negotiation

# IV. Services of the Centre

The GNSS Centre of Excellence main services:

- Database of GNSS applications and projects
- Suggestions for the development of new GNSS applications according to the needs of operation
- Specification of user requirements for new applications
- Sharing of the latest findings, trends and visions in the GNSS field
- Testing of applications
- Verification and validation
- Support and ensuring of the certification
- Support in marketing, sales and implementation
- Training in GNSS issues
- General consultancy in the GNSS area

# V. Areas of Interest (1/4)

## Offered Cooperation

### Applications of Flight Operations

- Design and publication of GNSS approach procedures
- Assistance in testing new applications using Galileo pseudo-satellites
- Flight validation of GNSS approach procedures
- Ground and flight validation of the GNSS signal
- Aviation Academy
- Flying Laboratory

# V. Areas of Interest (2/4)

## Offered Cooperation

### Applications for Airport Ground Operations

- Vehicle Onboard Guidance System
- Fleet Management in apron area
- Pavement Management Systems
- **Airfield Lighting Maintenance Systems**, management of **winter maintenance vehicles**
- **3D Geographical Information Systems** and geodetic applications
- Navigation for flight crew and automatic taxiing systems
- **ADS-B** for small and medium airports
- System for baggage tracking
- 3D navigation for passengers as assistance to parking and moving inside the terminal including flight and commercial information
- System **integration of all GNSS application**

# V. Areas of Interest (3/4)

## Demand for Partners in Railway sector

- Systems for monitoring vehicles and operation management
- Energetic and fuel efficiency applications
- Applications for logistic (tracking objects on railway lines – engines, railway vehicles, containers, parcels etc.)
- Information systems
- Signaling and control systems
- Diagnostic systems
- Rescue systems (S&R services and communication in case of emergency)

# V. Areas of Interest (4/4)

## Demand for Partners

### Applications in Road Transport

- Geographical Information Systems and geodetic applications for supporting engineering and construction
- Applications for road management
- Applications for intelligent ITS

# VI. Targeted fields

## Air Traffic

- Flight operations
- Ground operations at airports
- Safety, security
- Maintenance & Avionics
- Handling
- General aviation
- Logistics and transportation of dangerous goods (DGR)

## Railway Traffic

- Railway transport route
- Passenger transport
- Haulage

## Road Traffic

**Cooperation with industries and companies operating in the fields of GNSS applications, as well as with SME and other institutions in the transport sector.**

# VII. Summary

**The GNSS Centre of Excellence (GCE) was established to strengthen the activities of the Czech Republic in development, testing and deployment of GNSS applications.**

In GCE organizations of major spheres of transport (air, railway, road) and industrial partners cooperate. This will create a common and broad expert background.

The Center's main activities will include cooperation and interaction of application users and industries: GCE will provide industrial partners primarily with ideas for new systems.

Furthermore there will be

- GNSS application and project database
- Specification of user requirements for new applications
- Testing of Applications
- Verification and Validation
- Support and ensuring of the certification
- Support in marketing, sales and implementation in the Czech Republic and abroad

**The ongoing GNSS activities will be centralized and new ones will be initiated. GCE will strengthen technological companies developing GNSS applications and will attract new companies into the field, including small and medium-sized enterprises.**
